ECOSYSTEM DEGRADATION

Ecosystem degradation is the depletion of the components of an ecosystem to such an extent that the system is no longer able to deliver its normal flow of benefits. An ecosystem is a community of organisms and their physical environment interacting as an ecological unit. Ecosystems provide numerous services to people, including:

- Provisioning services – goods produced or provided by ecosystems, such as → food, fresh → water, and timber;
- Regulating services – the benefits from regulating climate, diseases, extreme natural events, and the flow of nutrients;
- Cultural services – the non-material benefits from ecosystems, including spiritual, recreational, aesthetic, inspiration, and education benefits; and
- Supporting services – those necessary for the production of the other ecosystem services, including soil formation, nutrient cycling, primary production, and carbon sequestration.

Examples of ecological degradation include deforestation, pollution, desertification and soil erosion. Ecological degradation can lead to increasing floods and droughts, lowered productivity and fewer resources available to local people. As companies, including their suppliers and customers, depend on ecosystems and their services, it makes business sense to minimise activities that lead to ecological degradation and identify possible opportunities associated with the risks.

Valli Moosa

ECO-TAXATION

→ Carbon tax, Eco-subsidies

Eco-taxation refers to the use of fiscal measures by governments to discourage certain sectors, technologies, products or services that have significant negative environmental impacts. In economics

terms, eco-taxation is a way to internalise the → externalities that the market fails to take account of. Typical examples include the taxation of fossil fuels, energy inefficient houses, aviation, → waste and pollution. Among the most common ecological taxes include fuel taxes, landfill taxes, → water quality charges and airport taxes.

Wayne Visser

ECO-TOURISM

→ Travel and leisure sector

Eco-tourism is responsible → travel to natural areas that conserves the → environment and sustains the well-being of local people. The intention is to enjoy an area's natural resources while minimising any ecological and social impact from the visitor. Tourism is the fastest growing industry in the world, with eco-tourism representing its fastest growing segment. Eco-tourism can contribute to → sustainable development, but the term can also be misunderstood and abused through → greenwash. → Certification schemes have been introduced that recognise ecotourism businesses that incorporate the true values of → conservation of biological and cultural diversity, sharing of economic benefits with local communities, and informing tourists about the natural values of the area they are visiting. Much eco-tourism involves visits to protected areas, which are areas that have been legally designated to achieve → conservation objectives, on both land and → water. For many protected areas, tourism is both a major source of funding and a serious management challenge; this calls for considerable investments in visitor management, both to ensure that the eco-tourist receives the expected experience and to ensure that the → environment, including the wild species people come to see, is not unduly disturbed.

THE A TO Z OF CORPORATE SOCIAL RESPONSIBILITY

A Complete Reference Guide
to Concepts, Codes and
Organisations

More than 100 *Expert Contributors*

Over 400 *Listed Entries*, including:

- 10 core terms
- 60 key terms
- 130 definitions
- 80 key codes & guidelines
- 40 key organisations
- 120 website addresses
- 110 referred terms

Also *Regional Profiles* for:

- Africa
- Asia
- Australia
- Europe
- Latin America
- North America

And *Sector Profiles* for:

- Automotive
- Banking
- Chemicals
- Infrastructure
- Media
- Mining
- Oil & gas
- Personal & household goods
- Pharmaceuticals
- Technology
- Telecommunications
- Travel & leisure
- Utilities

DESCRIPTION

This is the world's first complete reference on CSR, compiled by the Institute for Corporate Culture Affairs (the ICCA). The entries have been written by leading experts, leading global thinkers and CSR practitioners. The reference also lists and describes the most important organizations and landmarks in the field of CSR. The book comprises 339 terms, which are split into core concepts, key words and definitions to form the standard reference for managers, academics, teachers, students, officials and volunteers in the field of CSR. This is a timely and innovative contribution to the field of Corporate Social Responsibility; the definitive terminology reference on CSR, business society relations and the organizations and standards in the field.
